

High-frequency fringe-tests with Onsala VGOS antennas

Friday, 29 October 2021 13:30 (0:15)

Content

In this talk I will present some preliminary results on fringe-tests done with the Oe-Ow baseline at frequencies above the usual VGOS band D. I will discuss what changes are needed compared to our “standard” VGOS system, and some ideas for how to deal with potential issues such as faint PCAL at high frequencies.
